

Drupal 8 and 9 Security Risk Assessment:

7 Key Vulnerabilities Facing Unsupported Sites

Are you still running your website on Drupal 8 or Drupal 9? With official support ended, your site may be exposed to the following critical risks:

Remote Code Execution (RCE) Attackers can exploit outdated Drupal 8 modules to execute malicious code on your web server—potentially taking over your site and all stored data.	Is your site protected against RCE vulnerabilities (CVE-2018-7600, “Drupalgeddon2”, etc.)? Yes <input type="checkbox"/> No <input type="checkbox"/> I’m not sure <input type="checkbox"/>
Cross-Site Scripting (XSS) Unpatched legacy modules can allow attackers to inject malicious scripts—leading to data theft, session hijacking, or malicious redirects.	Are your forms, user-uploaded content, and admin pages sanitized and secure? Yes <input type="checkbox"/> No <input type="checkbox"/> I’m not sure <input type="checkbox"/>
SQL Injection Unsupported modules and missing security patches make it easier for hackers to inject malicious SQL queries, compromising your database.	Have all your custom and contributed modules been reviewed for SQL injection flaws? Yes <input type="checkbox"/> No <input type="checkbox"/> I’m not sure <input type="checkbox"/>
Broken Authentication & Access Controls Obsolete authentication features and unpatched access controls can grant unauthorized access to sensitive admin pages or user data.	Is your login, user registration, and role management fully protected by up-to-date code? Yes <input type="checkbox"/> No <input type="checkbox"/> I’m not sure <input type="checkbox"/>

<p>Unpatched Security Flaws/Zero-days Without ongoing security updates, newly discovered vulnerabilities (in core or contributed modules) will not be patched—leaving your site at escalating risk.</p>	<p>Is your site receiving security advisories and updates, or is it “frozen” on old code? Yes <input type="checkbox"/> No <input type="checkbox"/> I’m not sure <input type="checkbox"/></p>
<p>Malware Injection & Defacement Compromised Drupal 8 or 9 sites are increasingly used to deliver malware, ransomware, or are defaced, damaging your organization’s reputation.</p>	<p>Do you regularly scan your site for malware and integrity changes? Yes <input type="checkbox"/> No <input type="checkbox"/> I’m not sure <input type="checkbox"/></p>
<p>Compliance Violations (GDPR, CCPA, etc.) Retention of personal data on an unsupported platform could put your organization at risk for regulatory fines and legal penalties.</p>	<p>Does your site meet current regulatory standards for data protection and security? Yes <input type="checkbox"/> No <input type="checkbox"/> I’m not sure <input type="checkbox"/></p>

What Next?

If you checked “No” or “I’m not sure” to any of the above:

- Your site is at risk.
- Contact us for a free, no-obligation Security Audit and Migration Assessment!

Get secure. Get compliant. Get upgraded.
